

## StockGuard Cap

The StockGuard Cap is a durable, attractive, UV stabilised polyurethane fence cap designed to fit quickly and securely over star pickets/iron posts.

The StockGuard Cap's purpose is to prevent potentially fatal injuries to horses and halt the dangerous, yet common practice of using stand-offs along a fence line.

The insulator on the Cap is held in place by snap fittings that have been designed to give way and release the tape should a horse take fright and try to jump over or run into the fence. The Cap should remain in place continuing to provide the necessary protection.

The option of a specially designed insulator which "locks" into standard iron post holes and accommodates StockGuard's electric fencing tape is also available.

Alternatively a polypipe sleeve can cover the entire post and attach one of our insulators to hold the tape in place.
