

QUOTE REQUEST FORM

To enable us to provide you with an itemised quote, please complete the information request below. A rough diagram indicating paddock dimensions, number of gates and power source is invaluable to help us estimate your fencing requirements (see below for more information).

How many gates in total:	
How many corners (not incl internal fences):	
Energiser required: <input type="radio"/> Yes <input type="radio"/> No	
If energiser required, what type: <input type="radio"/> Mains <input type="radio"/> Solar	

How many kms of fencing do you anticipate in total:
Distance from energiser to the fence:
Fence tester required: <input type="radio"/> Yes <input type="radio"/> No
How did you hear about StockGuard?
Comments:

Rough diagram/mud map instructions:

Step out your fence (in metres). Draw your plan and try to include:

- at what point will you connect power to the fence
- what do you want to do at your gateways - tape gates or cable underneath, if necessary
- what fence posts will you use and how far apart are they - no more than 5 metre spacings
- number of tape runs required - two is usually more than adequate unless you have mares and foals

Scan, upload & email your plan via the enquiry form online or email with this form direct to sales@stockguard.com.au. It doesn't have to be an architect's drawing, a rough mud map is more than sufficient to explain your requirements, for example:

gate = steel, approx 3m
posts = wooden, set at 5m spacings
2 tape runs (brown)
power =
